PROJECTS

Juuno Platform

- Designed and developed a comprehensive campaign management platform for an advertising company, enabling users to create, launch, and track digital ad campaigns with ease. The platform includes real-time data dashboards for live monitoring, in-depth performance analytics for evaluating key metrics, and automated reporting features to streamline insights and improve decision-making.

NE Play

- NE Play enables influencers to create and manage custom games for their audience. The platform offers intuitive tools and templates for designing engaging gaming experiences, with features for tracking player engagement and rewarding participants.

Virtual League Game

- Developed a virtual football game where users predict match outcomes for their favorite teams. Leveraged a random number generator for results and implemented WebSocket for real-time communication, optimizing database queries for performance.

Defender

- Developed a crash game where users predict goal crashes to win money. Migrated the application from Angular to Next.js, acquired proficiency in Next.js routing and server-side rendering (SSR). Focused on optimizing performance and SEO, while integrating interactive features and enhancing UI/UX during the migration process.

CricDesi

- Cricket fans can play interactive and realistic cricket games, compete with others in multiplayer mode, and earn coins through daily challenges. The app offers a smooth gaming experience with dynamic gameplay, real-time leaderboards, and a rewarding system that keeps users engaged and coming back for more.

BackOffice

- An Admin project enabling administrators to manage game configurations and integrations across online gaming platforms. Key challenges included multi-platform integration, complex configurations, and creating a user-friendly interface, resulting in streamlined management, reduced setup time, and improved efficiency.
